

Freeform® PAL  Technologies	Product Classification: EVERYDAY > Progressive	Marking: E
	Minimum Fitting Heights: 16mm, 19mm	

When more is too much, stick with the Shamir **Element™**

Not only do we want to help the consumer, but we want to help the eye care professional as well. With more product offerings to ensure a progressive solution for any budget, we've got your back (backside that is). Trust us, this lens has top-of-the-line features at a price that will make them smile.

Shamir **Element™** – The Elementary Freeform®

Shamir **Element™** is Shamir's elementary Freeform® design built on 2 essential technologies, EyePoint Technology® and Direct Lens Technology® which together create a back surfaced freeform design and gives you the opportunity to provide your patients these technologies at a reasonable price.

We like to think that we understand consumers and where they're coming from; so when it was brought to our attention that some consumers really like what the Shamir **Autograph III®** had to offer but couldn't afford the price, we decided that it was our job to help them out. The answer: Shamir **Element™**, our elementary Freeform® lens!

With Shamir **Element™** your patients get a back surfaced freeform progressive lens made just for them. So what does that mean? Well, **Element™** doesn't have all the same bells and whistles that Shamir **Autograph III®** does, but it's a reasonably priced alternative that's created to the highest level of optical accuracy (up to 1/100 diopters) and provides up to 20% wider fields of vision.

Features & Benefits

- Back-surface Freeform® design
- 20% wider fields of vision
- Designed with EyePoint Technology®
- Wider fields of vision
- Reasonably priced Freeform® progressive

Technologies

EyePoint Technology®

By analyzing data from over 3,600 points on each lens Shamir is able to create lenses that offer patients a more accurate and comfortable visual experience.

Freeform® Technology

Shamir **Element™** is a Freeform® design, which means the design and the patient's Rx are on the back of the lens, ultimately providing wider fields of vision. Our easy access diagram below explains everything.

Back surface design widens patient's field of view.

While semi-finished molds suffer from slight degradations resulting in a loss of optical design, the same isn't true for Shamir **Element™**. Each Shamir **Element™** lens is created from a Freeform® machine, right on the spot and not from a 20th century mold. The lens is also personalized to fit the patient's needs and both the patient's Rx and the optical design are on the back of the lens which opens up the fields of vision by up to 20% for the patient. Want more benefits? **Element™** virtually eliminates unwanted astigmatism, swim and peripheral distortions providing maximized fields of vision. If you ask us, there's no competition here.

Element™
